

Is your testing ticking all the right boxes?

The perennial challenge with manual testing is that it is slow, error prone, rarely thorough enough and constrained by the availability of business resources.

TestPro have developed an Automated Test Solution specifically for SAP. By using pre-programmed reusable and customisable test suites, various data sets can be used to test the core components of the SAP system. An Automated Testing Solution makes your deployment and upgrades quicker, safer and cheaper.

The Testing Professionals

SAP Testing Solutions

TestPro has specific expertise to assist you with a SAP implementation to make the testing of the deployment, or upgrade more time and cost efficient.

We offer a range of solutions for SAP deployments and upgrades, from Test Management, Performance and Load Testing, Test Automation solutions and Manual Testing.

We blend our rich experience in managing and executing testing projects with capability in SAP implementations, to make the testing of SAP deployments more efficient and cost effective.

In particular we have developed a capability to implement test automation for SAP implementations using TAF Pro, our Test Automation Framework.

By taking a structured and planned approach to a SAP assignment, we can assist you to

- ▶ Create and manage test assets strategically, making them consistent and reusable
- ▶ Using TAF Pro, cost effectively build a set of reusable test automation assets components that will simplify regression testing for future SAP releases
- ▶ Validate the performance of your SAP system under a range different load and stress conditions.

TestPro practitioners are experienced with test automation and understand how to implement automation for large projects with minimal overhead and provide large time and efficiency gains compared with manual testing.
